

SF311 request closure analysis

Requests opened August 3-9, 2026 | Data extracted September 22, 2026

Summary

SF311 connects people in San Francisco with City information and non-emergency services. Residents and visitors can report problems such as graffiti, blocked sidewalks and broken streetlights by telephone, website or mobile app. The public case data track service requests, including their category, location and recorded opening and closure times.

This analysis compares closure times for San Francisco 311 requests across districts and request categories. It covers 16,876 requests opened August 3-9, 2026, using data downloaded from DataSF on September 22. Street and Sidewalk Cleaning and Parking Enforcement made up more than half of the requests received that week.

Closure-time estimates use the 15,743 records with usable opening and closure timestamps. The median was 10.14 hours. All requests are included in the volume totals, including those still open at the time of download.

Table 1. Summary by district

	requests	with_time	median_hours
district			
1	1064	1010	5.47
2	1347	1236	5.50
3	2357	2158	14.14
4	697	671	3.61
5	1926	1816	12.10
6	2139	1995	13.80
7	781	721	15.33
8	1793	1689	9.40
9	2536	2366	6.14
10	1232	1139	13.89
11	894	842	5.26
Not specified	110	100	27.61
Grand total	16876	15743	10.14

requests: total requests; with_time: requests with usable closure times; median_hours: median elapsed hours from opening to closure among those requests.

District 9 had the most requests (2,536), followed by district 3 (2,357) and district 6 (2,139). District 4 had the fewest, with 697. The median closure time was lowest in district 4, at 3.61 hours, and highest among the numbered districts in district 7, at 15.33 hours.

The 110 requests without a district label appear under "Not specified". Their median was 27.61 hours. District totals include all request categories; the category breakdown follows in Table 2.

Waste of Water	8	8	22.43
Water Quality	9	9	3.08
Grand total	16876	15743	10.14

n/a: no closure-time estimate. Category names follow the source data. Grand total gives the overall counts and median.

Request volume and closure times

Which categories had the most requests?

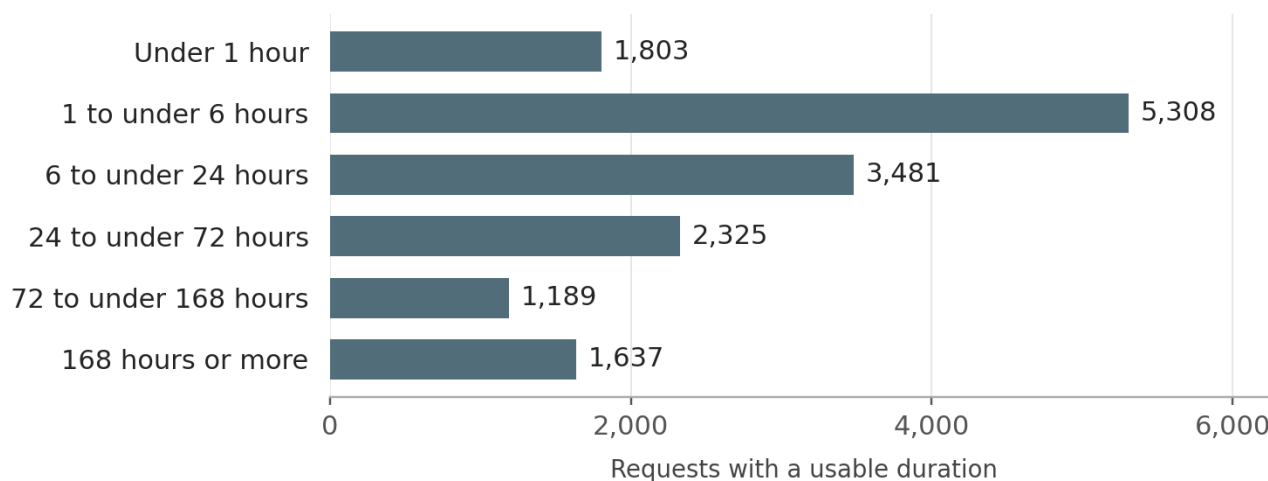

Street and Sidewalk Cleaning accounted for 6,261 requests, followed by Parking Enforcement with 3,722. Together, these two categories made up 9,983 of the 16,876 requests. General Request and Graffiti Public were the next largest, with 1,256 and 1,248 respectively.

The remaining categories were much smaller. Encampment had 817 requests, while 17 categories had fewer than 100 each. Several had only one or two. These are counts of reports received; more than one report may concern the same incident.

How long did requests take to close?

Most recorded closures occurred within a day of opening. Of the 15,743 requests included in the duration analysis, 10,592 closed in less than 24 hours. A further 1,637 took at least a week.

Figure 1. Requests by recorded closure duration

Time bands have different widths. Counts include the 15,743 requests used in the closure-time analysis.

The mean closure time was 69.21 hours, well above the median of 10.14 hours. The longest recorded duration was 1,081.52 hours, or about 45 days. These long durations pull the mean upward even though most requests closed much sooner.

The opening dates define the reporting week. Closure dates extend beyond August 9, up to the September 22 download. Requests still open on that date have no completed duration in this analysis.

Differences between request categories

Which categories had the highest and lowest median closure times?

MTA Parking Traffic Signs Normal Priority had the highest median, at 275.37 hours, or about 11.5 days. Blocked Street and Sidewalk had the lowest, at 1.68 hours. The selected rows from Table 2 are shown below.

Table 3. Categories with the highest and lowest medians

category	requests	with_time	median_hours
MTA Parking Traffic Signs Normal Priority	175	135	275.37
Blocked Street and Sidewalk	440	423	1.68

Among the larger categories, Parking Enforcement had a median of 2.59 hours and Street and Sidewalk Cleaning had a median of 7.97 hours. Graffiti Public took longer, with a median of 73.52 hours. The categories cover different kinds of work; the data do not explain what caused these differences.

Gaps in the closure records

Closure times were available for 6,196 of the 6,261 Street and Sidewalk Cleaning requests. For Tree Maintenance, only 83 of 306 requests contributed to the median of 139.98 hours. Most Tree Maintenance requests therefore fall outside that estimate.

Requests that were still open at the download date could eventually have longer durations than those already closed. Volunteer Programs had one request and no closure-time estimate.

Conclusion

Cleaning and parking reports accounted for most requests during the week. The overall median closure time was about ten hours, but category medians ranged from less than two hours to more than eleven days. The large gap between the mean and median also reflects a smaller number of requests with much longer durations.

District figures combine these different kinds of requests. Comparing a single category across districts would allow a closer look at geographic differences. The results here describe recorded closures: they do not establish when the reported problems were fixed.
